Project title: Application to the monitor

Description: Nowadays, there are many people have pets at home, such as large dogs. Due to lack of training, many large dogs break furniture when they are home alone. I would like to design an application to be installed on the phone that can connect to the monitor. People can monitor their pets at home through mobile apps. People can reprimand a home pet directly through a mobile app if the pet vandalizes the furniture. Meanwhile, the monitor will automatically identify the pet and the camera will follow the pet. The monitor will transmit the owner's voice and the pet will not continue to damage the furniture
